GARFIELD INTERCEPTOR REHABILITATION PROJECT

Dear Residents & Business Owners,

Macomb County Public Works Commissioner, Candice Miller, is committed to maintaining County Infrastructure. As a result, work will soon begin to perform repairs within the Garfield Interceptor. This seven (7) foot diameter sewer carries sanitary flow serving Macomb County communities and is part of the Macomb Interceptor Drain Drainage District (MIDDD).

Residents and business owners will see Doetsch Environmental Services, SAK Construction and Mersino Dewatering equipment, materials and manpower staged and working within Garfield Road. The sewer is in the west right-of-way of Garfield Road and construction will necessitate closure of the southbound curb lane of Garfield Road through the 21 Mile Intersection. There will be a traffic shift, but both northbound and southbound traffic, as well as all driveways, will be maintained. There will be no disruption to water or sewer service.

The traffic shift is expected to begin around January 9, 2023 and remain in service until the end of March 2023.

“This project is part of the continued rehabilitation and investment we are making in our underground infrastructure so that we won’t have another sinkhole,” Macomb County Public Works Commissioner Candice S. Miller said. “We appreciate your patience and understanding during the construction period.”

If you have questions or concerns, please contact Keith Lumma with the Macomb County Public Works Office at keith.lumma@macombgov.org or 586-557-4071.

Sincerely,

Candice S. Miller
Macomb County Public Works Commissioner
